// NEUENHAUSER MASCHINENBAU GMBH

A diverse range of services

Six successful business units perform successfully within the mechanical engineering branch under the umbrella of Neuenhauser Maschinenbau GmbH.

FAMILY OWNED IN SECOND GENERATION
Our mid-size identity is one of our guarantors of success

COMBINING ABILITIES • ENGINEERING INNOVATIONS

We are able to provide a wide range of services to our customers worldwide. In open exchanges, we develop individual solutions which we implement precisely in subsequent steps. Whatever our customers desire, we make it possible for them, on time and in compliance with the specifications. We achieve the high quality standards placed on our products through process-optimised workflows and the use of ultra-modern technologies. These products are subject to strict controls regarding time and budget. For us, the satisfaction of our customers is our top priority.

Innovation is generated through communication.

The open exchange with our partners and customers is one of our most important services, and forms the foundations for our individual collaborations.

An effectively-linked network.

Together, our different business units constitute a wide range of services which are supported by the expertise and experience of our employees.

THE RIGHT CONTACT FOR EVERY PROJECT

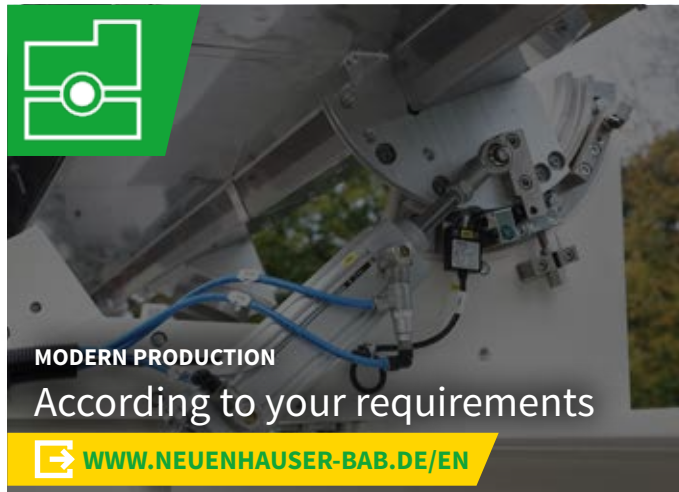

On our website you can find an overview, subdivided into business units, and can then determine the correct contact for your project.

FROM IDEAS COME RESULTS

The Neuenhauser Maschinenbau GmbH provides the umbrella for various successful business units from the field of mechanical engineering and plant design. Under this umbrella, we put into practice a respectful, appreciative and open company culture in which every employee acts independently and takes on responsibility.

ASSEMBLIES AND PLANT DESIGN

The Assemblies and Plant Design business unit never loses sight of the most important priority: the individual customer with their individual requirements. Our employees develop custom-tailored solutions for each project which guarantee the smooth adoption of all technical specifications.

During the production of individual parts, assemblies and machines for very different branches, we fulfil the expectations of our customers through high economic viability, flexibility and guaranteeing of schedules. We offer mechanical engineering in all its complex facets from a single source.

TEXTILE INDUSTRY AND AUTOMATION

Neuenhauser, founded in 1955 as a construction and production company, has helped to shape the automation of the textile industry, and still continues to do so today.

Through complete automation processes, the Textile Industry and Automation business unit supports its customers in increasing the product quality, creating a clean and efficient production environment and designing processes to become more reliable and economically efficient. Outside the textile industry, we incorporate our specialist know-how into the field of automation, in branches such as the glass fibre, automotive, plastics and food industries.

CONTRACT MANUFACTURING

As certified service providers with decades of experience in contract manufacturing, the Contract Manufacturing business unit is able to master even the most complex of customer wishes on time and reliably. Fixed contacts continuously accompany a project from the customer's initial wish right up to delivery.

Our extensive spectrum of services comprises production, quality control, logistics, assembly, repairs and service. We are always available for you – as one of our many clients, and yet simultaneously our most important customer - with our specialist knowledge, experience and ultra-modern equipment.

ENVIRONMENTAL TECHNOLOGY

The Environmental Technology business unit develops and manufactures renowned mobile machines and stationary complete plants which are able to master the most difficult challenges in the field of environmentally-compatible treatment of waste and recyclable materials of very different types and qualities.

In accordance with the individual customer requirements, our colleagues develop optimised solutions for composting, biomass treatment, recycling, the recovery of recyclable materials or gypsum waste treatment. Our performance capacity is the result of our experience, motivation and teamwork.

COMPONENTS, ASSEMBLIES AND SYSTEMS

The Neuenhauser NCAS (Components, assemblies and systems) business unit develops the appropriate solution for every problem in close collaboration with its clients. As specialists in metal, surface and plant technology, all our experience can be applied within one process chain.

Modern machinery, a team of qualified and highly-motivated employees and our professional quality management upholds our high quality standards long-term and continuously.

VORWALD EXPANSION ELEMENT

Founded as a repairs company, we have grown alongside our clients to become Germany's leading manufacturer of sleeve clamping elements. During years of innovative development work, we created the comprehensive product program for which Neuenhauser Vorwald is famous worldwide today.

With the clear objective of always being able to offer our clients the best solutions, we supply the appropriate clamping elements for all applications and provide reliable service. This is guaranteed through our particularly wide product range, a global sales system and international connections.

// INNOVATION THROUGH COMMUNICATION

Our paths are short and our partnerships long

The medium-sized company identity of Neuenhauser Maschinenbau GmbH represents one of the guarantees for the success of our company, and is consciously maintained.

EVERYTHING UNDER ONE ROOF

The individual business units at Neuenhauser Maschinenbau GmbH operate independently on the market, and can adjust themselves optimally to the requirements of their respective customers.

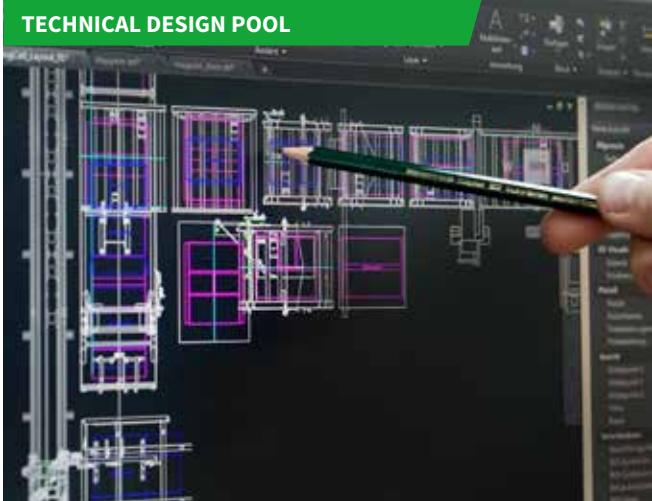

In addition, important strategic decisions are centrally organised in order to provide all business units with the security of a strong management within which the expertise and experiences from all units are merged.

At the main headquarters in Neuenhaus, the business units are able to make use of a strong network of Technical and Administrative Management.

The **TECHNICAL DESIGN POOL**, the **ELECTRICAL ENGINEERING DEPARTMENT**, the **GOODS RECEIPT AND DISPATCH**, the in-house plant **MAINTENANCE AND REPAIRS**, the **METALWORKING SHOP**, the **MECHANICAL PRODUCTION**, the **ORDER PROCESSING CENTRE**, the central **STEEL STORE** and the **PAINTSHOP** all belong to the Technical management.

The business unit departments of **CONTROLLING**, central **PURCHASING**, **ACCOUNTING**, **IT & ORGANISATION** and the **HR DEPARTMENT** are all supported through the Administrative Management.

TECHNICAL DESIGN POOL

INNOVATION MEETS TRADITION

Our design department consistently pursues their aim of impressing customers with the best, most appropriate and most practical solutions. The wishes and expectations of our customers provide the inspiration for customer-tailored solutions. If required, we develop ideas or revise already-existing documents to achieve the optimum concept for your project.

PAINTSHOP

PROVIDING AND SECURING QUALITY

The qualified employees in our in-house paint shop prepare the surfaces of our machines, spare parts and small components exactly according to the wishes and specifications of our customers. Here we work exclusively in accordance with the latest technological developments in order to guarantee the durability of our products.

ELECTRICAL ENGINEERING DEPARTMENT

SUCCESSFUL TOGETHER

The electrical engineering department supplies both our business units and customers with holistic control systems. Our experienced colleagues specialise in control cabinet construction, machine cabling, electrical design, planning, development of PLC software, electrical assemblies and on-site commissioning as well as long-term service provision.

QUALITY ASSURANCE

SETTING AND MAINTANING STANDARDS

In order to guarantee our high quality standard for every product which leaves our house, we trust our in-house quality assurance, which, as an independent department, ensures that our standards are adhered to through unbiased and careful monitoring processes. Customers can rest assured that the quality characteristics which distinguish us as a company are upheld without exception.
